

## Two-Eyed Seeing Webinar: Navajo Astronomy + NASA Questions

*There are only a few questions, so please be thoughtful and have depth in your responses. Your responses should be at least 3-4 sentences long.*

- 1. Tell me about the Navajo relationship with the sky. What role(s) does astronomy play in Navajo culture? Discuss at least three examples that you learned about.**
- 2. A lot of scientific knowledge is embedded in Navajo culture and traditions. What is one example of Navajo beliefs or traditions that clearly shows scientific knowledge?**
- 3. Think about the diversity of cultures, religions and backgrounds in our classroom, our school, and our community. While studying astronomy, why might it be important to learn about how different cultures (such as the Navajo culture) view the sky?**
- 4. What are two questions you have for the Navajo Astronomers, teachers or students?**
